

Website Performance, SEO & Technical Health Report

<https://www.amipi.com>

Overall health

76/100

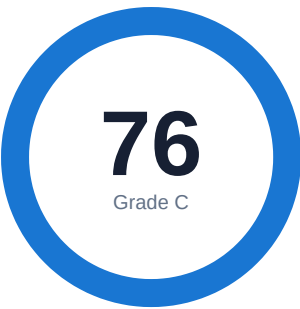

Pages audited

114

Completed

2026-07-14

1. Executive Summary

The crawl analyzed 114 pages and identified 34 distinct issues across 5370 total page instances. 138 findings are critical. Address the top priorities to improve stability and UX.

Audit scope: Breadth-first internal crawl with static HTML inspection, response timing, payload measurement, technical SEO, metadata, accessibility, content, URL, and performance checks. Note: Scoring is derived from an internal crawl methodology and is not directly equivalent to third-party audit tool scores.

Top Priorities & What Needs To Be Done

- **Missing <title> tag**
Why it matters: Search relevance and click-through rate
To do: Create unique titles, descriptions, canonicals, and one clear H1 per indexable page.
- **Very slow response time: 14426ms**
Why it matters: User experience, conversion, and Core Web Vitals
To do: Reduce server time, defer non-critical JavaScript, compress media, and cache assets.

138 Critical findings	2551 Medium findings	2681 Low findings	5370 Total findings
--------------------------	-------------------------	----------------------	------------------------

Audit scope and crawl coverage

PAGES CRAWLED	MAXIMUM CRAWL DEPTH	AVERAGE RESPONSE	HOST AUDITED
114	3	5873.2 ms	www.amipi.com

2. Issues Fixed Since Last Run

✓ **3 issues resolved** since the last audit. Great progress!

CATEGORY	PAGES	ISSUE & SAMPLES	RECOMMENDATION FOLLOWED
Broken Links	9	Page failed to load https://www.amipi.com https://www.amipi.com/bracelets/ https://www.amipi.com/flexi-bangles/ https://www.amipi.com/bands/ https://www.amipi.com/necklaces/	Identify the incorrect URL in your site's code or CMS, then update the link to point to the correct existing page or implement a 301 redirect from the broken URL to the relevant destination. (Context: Page.goto: Timeout 15000ms exceeded. Call log: navigating to "https://www.amipi.com/", waiting until "networkidle")
Broken Links	2	Broken resource (a): HTTP 400 https://www.amipi.com/Schedule-Appointment/ https://www.amipi.com/register/downloads/application.pdf	Audit all external resource URLs and replace broken images/scripts with self-hosted versions or reliable alternatives; for 403 errors, verify hotlinking permissions or host the resources locally.
Broken Links	1	Broken resource (script): HTTP 403 (Anti-Bot/Access Denied) https://www.amipi.com/Schedule-Appointment/	Host the blocked script locally or switch to a CDN that permits your domain, and configure the external service's security rules to allow your referer/origin.

3. New Issues Identified

⚠ **30 new issues detected** since the last audit. These require review.

SEVERITY	CATEGORY	PAGES	ISSUE & SAMPLES
CRITICAL	Metadata	2	Missing <title> tag https://www.amipi.com/My-Account https://www.amipi.com/My-Wishlist/

Performance

F 3397 findings

User experience, conversion, and Core Web Vitals

Recommended approach: Reduce server time, defer non-critical JavaScript, compress media, and cache assets.

SEVERITY	AFFECTED PAGES	FINDING & SAMPLES	RECOMMENDED FIX
CRITICAL VIEWPORT: DESKTOP, MOBILE	68	Very slow response time: 14426ms https://www.amipi.com https://www.amipi.com/sell/ https://www.amipi.com/basics/ https://www.amipi.com/ https://www.amipi.com/studs/	Implement server-side caching (Redis/Memcached) for frequent database queries and enable HTTP caching headers, while profiling and optimizing slow SQL queries with proper indexing.
MEDIUM VIEWPORT: DESKTOP, MOBILE	66	31 render-blocking <script> tags (no async/defer) https://www.amipi.com https://www.amipi.com/sell/ https://www.amipi.com/basics/ https://www.amipi.com/ https://www.amipi.com/studs/	Add `defer` to non-critical scripts in the ` <head>` and move critical inline scripts to the end of `<body>`, ensuring dependencies load in correct order.</body></head>
LOW VIEWPORT: DESKTOP, MOBILE	42	High resource count on page: 101 (scripts/CSS/images) https://www.amipi.com https://www.amipi.com/basics/ https://www.amipi.com/ https://www.amipi.com/studs/ https://www.amipi.com/hoops/	Consolidate CSS and JavaScript files into single bundles, combine images using CSS sprites or inline SVGs, and remove unused third-party scripts to reduce HTTP requests.
MEDIUM VIEWPORT: DESKTOP, MOBILE	66	Broken resource request (404) on page Resource: https://www.amipi.com/product_thumb.php?img=images/category_navigation_image/202006291448334040_Main_W.jpg&w=150&h=150 https://www.amipi.com https://www.amipi.com/sell/ https://www.amipi.com/basics/ https://www.amipi.com/ https://www.amipi.com/studs/	Identify the missing resource URLs in your network tab or server logs, then either restore the missing files to the correct paths, update the references to point to valid locations, or remove the broken references entirely.
LOW VIEWPORT: DESKTOP, MOBILE	66	Large third-party script loaded: 139.9KB URL: https://s3.amazonaws.com/downloads.mailchimp.com/js/mc-validate.js https://www.amipi.com https://www.amipi.com/sell/ https://www.amipi.com/basics/ https://www.amipi.com/ https://www.amipi.com/studs/	Audit each third-party script's necessity and remove non-essential ones; for required scripts, load them asynchronously with `async` or `defer`, host critical libraries locally, and use resource hints like `preconnect` or `dns-prefetch` for external domains.
MEDIUM VIEWPORT: DESKTOP, MOBILE	68	Heavy JavaScript payload: 2.6MB https://www.amipi.com https://www.amipi.com/sell/ https://www.amipi.com/basics/ https://www.amipi.com/ https://www.amipi.com/studs/	Implement code-splitting and lazy-loading for non-critical JavaScript, enable Brotli/Gzip compression, and remove unused dependencies or polyfills to reduce the total script size below 500KB.

Search relevance and click-through rate

Recommended approach: Create unique titles, descriptions, canonicals, and one clear H1 per indexable page.

SEVERITY	AFFECTED PAGES	FINDING & SAMPLES	RECOMMENDED FIX
LOW VIEWPORT: DESKTOP, MOBILE	44	Title length is 45 chars (recommended 50-60) Wholesale Diamonds & Fine Jewelry AMIPI Inc https://www.amipi.com https://www.amipi.com/basics/ https://www.amipi.com/ https://www.amipi.com/studs/ https://www.amipi.com/hoops/	Expand page titles to 50-60 characters by adding relevant keywords, brand names, and descriptive phrases that accurately summarize the page content and improve click-through rates.
MEDIUM VIEWPORT: DESKTOP, MOBILE	70	Missing meta description https://www.amipi.com https://www.amipi.com//sell/ https://www.amipi.com/basics/ https://www.amipi.com/ https://www.amipi.com/studs/	Add a unique, descriptive meta description tag (150-160 characters) to the <head> section of each page that accurately summarizes the page content and includes primary keywords.
MEDIUM VIEWPORT: DESKTOP, MOBILE	70	Missing canonical tag https://www.amipi.com https://www.amipi.com//sell/ https://www.amipi.com/basics/ https://www.amipi.com/ https://www.amipi.com/studs/	Add a self-referencing canonical tag (`<link rel="canonical" href="https://example.com/current-page-url" />`) to the `<head>` section of every indexable page to specify the preferred URL version.
LOW VIEWPORT: DESKTOP, MOBILE	68	Missing lang attribute on <html> https://www.amipi.com https://www.amipi.com//sell/ https://www.amipi.com/basics/ https://www.amipi.com/ https://www.amipi.com/studs/	Add a valid lang attribute to the <html> tag (e.g., <html lang="en">) matching the page's primary language.
MEDIUM VIEWPORT: DESKTOP, MOBILE	24	Missing H1 tag https://www.amipi.com/basics/ https://www.amipi.com/studs/ https://www.amipi.com/hoops/ https://www.amipi.com/certified.php/ (and 1 variant) https://www.amipi.com/bracelets/	Add a single, descriptive H1 tag near the top of the page content that accurately summarizes the main topic using relevant keywords. Ensure every indexable page has exactly one H1 that is visible to users and not hidden via CSS or JavaScript.
CRITICAL VIEWPORT: DESKTOP, MOBILE	2	Missing <title> tag https://www.amipi.com/My-Account https://www.amipi.com/My-Wishlist/	Add a unique, descriptive <title> tag within the <head> section of every page that accurately reflects the page content and includes primary keywords near the beginning.

Reliable previews and referral engagement

Recommended approach: Add unique Open Graph and Twitter/X card tags.

SEVERITY	AFFECTED PAGES	FINDING & SAMPLES	RECOMMENDED FIX
LOW VIEWPORT: DESKTOP, MOBILE	70	Missing Open Graph title Add og:title for reliable social previews. https://www.amipi.com https://www.amipi.com//sell/ https://www.amipi.com/basics/ https://www.amipi.com/ https://www.amipi.com/studs/	Add a unique, descriptive <code><meta property="og:title" content="Your Page Title" /></code> tag within the <code><head></code> section of each page, ensuring it accurately reflects the page content and is under 60 characters for optimal display.
LOW VIEWPORT: DESKTOP, MOBILE	70	Missing Open Graph description Add og:description using the page's unique value proposition. https://www.amipi.com https://www.amipi.com//sell/ https://www.amipi.com/basics/ https://www.amipi.com/ https://www.amipi.com/studs/	Add a unique <code><meta property="og:description" content="..."></code> tag to the <code><head></code> of each page with a compelling 150-160 character summary of the page content.
LOW VIEWPORT: DESKTOP, MOBILE	70	Missing Twitter/X card metadata Add twitter:card and related sharing tags. https://www.amipi.com https://www.amipi.com//sell/ https://www.amipi.com/basics/ https://www.amipi.com/ https://www.amipi.com/studs/	Add Twitter Card meta tags (twitter:card, twitter:title, twitter:description, twitter:image) to the HTML head section of each page.

Inclusive use and WCAG alignment

Recommended approach: Correct semantic and accessible-name issues, then validate with keyboard and screen-reader testing.

SEVERITY	AFFECTED PAGES	FINDING & SAMPLES	RECOMMENDED FIX
MEDIUM VIEWPORT: DESKTOP, MOBILE	68	Document language is not declared Add a valid lang attribute to <code><html></code> . https://www.amipi.com https://www.amipi.com//sell/ https://www.amipi.com/basics/ https://www.amipi.com/ https://www.amipi.com/studs/	Add a lang attribute to the opening <code><html></code> tag specifying the primary language of the document (e.g., <code><html lang="en"></code>).
MEDIUM VIEWPORT: DESKTOP, MOBILE	68	14 links have no accessible name Add visible link text or an aria-label. https://www.amipi.com https://www.amipi.com//sell/ https://www.amipi.com/basics/ https://www.amipi.com/ https://www.amipi.com/studs/	Ensure every <code><a></code> element has discernible text content, an <code>aria-label</code> , or <code>aria-labelledby</code> attribute providing a clear, descriptive name for the link's purpose.
MEDIUM VIEWPORT: DESKTOP, MOBILE	68	94 form controls lack labels Associate each control with a label or aria-label. https://www.amipi.com https://www.amipi.com//sell/ https://www.amipi.com/basics/ https://www.amipi.com/ https://www.amipi.com/studs/	Ensure every form control has an associated label using <code><label for="id"></code> , <code>aria-label</code> , or <code>aria-labelledby</code> attributes, and verify labels are descriptive and programmatically linked to their inputs.

ALT Tags

A 301 findings

Accessibility and image search

Recommended approach: Add concise, descriptive ALT text; use empty ALT only for decorative images.

SEVERITY	AFFECTED PAGES	FINDING & SAMPLES	RECOMMENDED FIX
LOW VIEWPORT: DESKTOP, MOBILE	66	Image missing ALT attribute https://amipi.com/images/footer-logo/jewelry-f.png https://www.amipi.com https://www.amipi.com//sell/ https://www.amipi.com/basics/ https://www.amipi.com/ https://www.amipi.com/studs/	Add descriptive alt attributes to all img tags that convey the image's purpose or content, using empty alt="" only for purely decorative images.

SEO

B 140 findings

Indexation and rich search results

Recommended approach: Implement sitemap, robots, canonical, and appropriate Schema.org markup.

SEVERITY	AFFECTED PAGES	FINDING & SAMPLES	RECOMMENDED FIX
LOW VIEWPORT: DESKTOP, MOBILE	1	Sitemap URL is not declared in robots.txt https://www.amipi.com/robots.txt	Add a "Sitemap: https://example.com/sitemap.xml " directive to your robots.txt file, replacing the URL with your actual sitemap location.
MEDIUM VIEWPORT: DESKTOP, MOBILE	70	No recognized Structured Data (JSON-LD schema) found Consider adding Organization, Product, or BreadcrumbList schema. https://www.amipi.com https://www.amipi.com//sell/ https://www.amipi.com/basics/ https://www.amipi.com/ https://www.amipi.com/studs/	Add valid JSON-LD schema markup using Schema.org vocabulary relevant to your content (e.g., Article, Product, Organization) in the page head or body, then verify implementation with Google's Rich Results Test.

Broken Links

C 121 findings

Crawlability & trust

Recommended approach: Repair the source URL or update references to the final 200-status destination.

SEVERITY	AFFECTED PAGES	FINDING & SAMPLES	RECOMMENDED FIX
MEDIUM VIEWPORT: DESKTOP, MOBILE	44	Crawling blocked by robots.txt This URL cannot be crawled or indexed. https://www.amipi.com/diamonds/ (and 42 variants) https://www.amipi.com/diamonds	Update the robots.txt file to remove or modify the Disallow directives blocking the affected URLs, ensuring the user-agent (e.g., Googlebot) has access to the necessary paths. Verify the changes using a robots.txt tester tool before deploying.
MEDIUM VIEWPORT: DESKTOP, MOBILE	2	Broken resource (a): HTTP 400 Target: https://www.facebook.com/Amipi-Diamonds-166389680059646/?fref=nf (Found on 68 pages) https://www.amipi.com/bands-old/ https://www.amipi.com/bands	Audit all external resource URLs and replace broken images/scripts with self-hosted versions or reliable alternatives; for 403 errors, verify hotlinking permissions or host the resources locally.
LOW VIEWPORT: DESKTOP, MOBILE	1	Broken resource (script): HTTP 403 (Anti-Bot/Access Denied) Target: https://kit.fontawesome.com/30561e4a31.js (Found on 66 pages) https://www.amipi.com/bands-old/	Host the blocked script locally or switch to a CDN that permits your domain, and configure the external service's security rules to allow your referrer/origin.

URL Structure

A 21 findings

Duplicate prevention and crawl efficiency

Recommended approach: Normalize URL casing and slashes, enforce one canonical version, and redirect alternatives.

SEVERITY	AFFECTED PAGES	FINDING & SAMPLES	RECOMMENDED FIX
MEDIUM VIEWPORT: DESKTOP, MOBILE	1	URL contains repeated slashes Redirect to one normalized URL and update internal links. https://www.amipi.com//sell/	Configure your web server or application router to normalize URLs by collapsing multiple consecutive slashes into a single slash and issue a 301 redirect to the cleaned URL.
LOW VIEWPORT: DESKTOP, MOBILE	10	URL contains uppercase characters Use lowercase canonical URLs consistently. https://www.amipi.com/Testimonials/ https://www.amipi.com/Contact-Us/ https://www.amipi.com/Schedule-Appointment/ https://www.amipi.com/My-Cart/ https://www.amipi.com/Privacy-Policy/	Convert all URLs to lowercase and implement 301 redirects from uppercase variants to their lowercase canonical versions to prevent duplicate content and ensure consistency.

Content

A 16 findings

Organic relevance and customer confidence

Recommended approach: Expand thin landing pages with useful copy, FAQs, headings, and contextual internal links.

SEVERITY	AFFECTED PAGES	FINDING & SAMPLES	RECOMMENDED FIX
LOW VIEWPORT: DESKTOP, MOBILE	7	No H2 subheadings found Organize the page with descriptive H2 sections. https://www.amipi.com/bands/ https://www.amipi.com/Contact-Us/ https://www.amipi.com/compare-product.php https://www.amipi.com/bands https://www.amipi.com/Contact-Us	Add descriptive H2 subheadings to break up content sections and improve readability and SEO structure.
MEDIUM VIEWPORT: DESKTOP, MOBILE	2	Thin page content: approximately 0 words Add useful, intent-focused copy, FAQs, and internal links. https://www.amipi.com/My-Account https://www.amipi.com/My-Wishlist/	Add substantial, unique content (minimum 300 words) that addresses user intent with relevant headings, images, and internal links to provide genuine value and topical depth.

LLM/GEO

A 5 findings

Generative Engine Optimization

Recommended approach: Add an llms.txt file, ensure Entity schema is present, and make content accessible to non-rendering bots.

SEVERITY	AFFECTED PAGES	FINDING & SAMPLES	RECOMMENDED FIX
MEDIUM VIEWPORT: DESKTOP, MOBILE	1	Missing Organization or Person schema Entity schema is critical for Knowledge Graphs used by LLMs to answer queries. https://www.amipi.com	Add Organization or Person schema markup (JSON-LD) to the homepage and key landing pages, including required properties like name, url, logo, and sameAs social profiles.
LOW VIEWPORT: DESKTOP, MOBILE	2	Thin static HTML content (Possible JS dependency) Page has very little text in raw HTML. Non-rendering LLM crawlers may fail to read your content if it relies on client-side rendering. https://www.amipi.com/My-Account https://www.amipi.com/My-Wishlist/	Implement server-side rendering (SSR) or static site generation (SSG) to deliver fully rendered HTML content in the initial server response, eliminating reliance on client-side JavaScript execution for primary content visibility.

Social

A 3 findings

Website quality

Recommended approach: Review and resolve the affected URLs.

SEVERITY	AFFECTED PAGES	FINDING & SAMPLES	RECOMMENDED FIX
LOW VIEWPORT: DESKTOP	1	Missing YouTube profile link on homepage https://www.amipi.com	Add a visible YouTube icon link in the header or footer navigation that directs to the official channel URL, ensuring it uses the correct brand assets and opens in a new tab.
LOW VIEWPORT: DESKTOP	1	Missing X/Twitter profile link on homepage https://www.amipi.com	Add a visible X/Twitter icon link in the header or footer navigation pointing to the official profile URL, ensuring it opens in a new tab with rel="noopener noreferrer" for security.
LOW VIEWPORT: DESKTOP	1	No Facebook Pixel tracking detected https://www.amipi.com	Add the Facebook Pixel base code to the <head> section of all pages and configure standard events (e.g., PageView, Purchase) via the Events Manager or Google Tag Manager to enable conversion tracking and audience building.

Security

A 2 findings

Visitor safety and browser trust

Recommended approach: Remove mixed content and deploy protective response headers after compatibility testing.

SEVERITY	AFFECTED PAGES	FINDING & SAMPLES	RECOMMENDED FIX
MEDIUM VIEWPORT: DESKTOP, MOBILE	1	Missing Security Headers: HSTS Implement missing headers to protect against clickjacking, MIME-sniffing, and downgrade attacks. https://www.amipi.com	Add the Strict-Transport-Security header with a max-age of at least 31536000 seconds, includeSubDomains, and preload directives to your web server configuration (e.g., Nginx: `add_header Strict-Transport-Security "max-age=31536000; includeSubDomains; preload" always;`).

9. Real Core Web Vitals (Lighthouse Lab Data)

Browser-rendered metrics from Google PageSpeed Insights for the homepage (<https://www.amipi.com>).

Desktop Performance

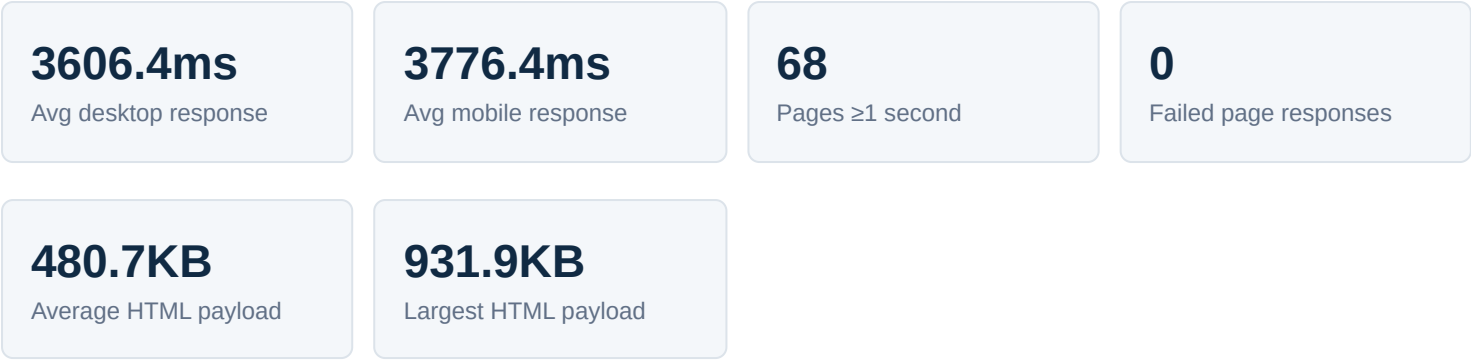

3.3 s LCP	5.6 s INP
0.002 CLS	460 ms TBT
6.4 s Speed Index	0.9 s FCP

Mobile Performance

11.1 s LCP	25.6 s INP
0 CLS	510 ms TBT
11.8 s Speed Index	4.5 s FCP

10. Crawl-Time Performance Analysis

Interpretation: These are crawl-time response and HTML transfer measurements across all internal pages. They provide broad site coverage but are deliberately not presented as Core Web Vitals.

Homepage Resource Breakdown (Network Waterfall)

Total transfer size by asset type measured via headless browser.

Resource Type	Transfer Size	GTmetrix / Optimization Savings Estimate
Scripts (JS)	2653.6 KB	Minifying and deferring unused JS could save up to 30%.
Images	1326.6 KB	Converting to WebP/AVIF and proper sizing typically saves 40-60%.
Stylesheets (CSS)	585.7 KB	Removing unused CSS can save 10-20%.
Fonts	311.0 KB	Using WOFF2 and font-display: swap improves rendering.
Documents (HTML)	541.4 KB	Gzip/Brotli compression usually handles this efficiently.
Other / Third-Party	440.8 KB	Review third-party pixels and embeds.

11. Social Profile & Tracking Presence

We scanned the homepage for connected social profiles and essential tracking pixels.

PLATFORM	DETECTED?	FOUND URL / DETAILS
Facebook	YES	https://www.facebook.com/Amipi-Diamonds-166389680059646/?fref=nf
Instagram	YES	https://www.instagram.com/amipiinc/
LinkedIn	YES	https://www.linkedin.com/company/amipi-inc-
YouTube	NO	Not found on homepage
X/Twitter	NO	Not found on homepage
Facebook Pixel	NO	Not found on homepage

12. Technology & Infrastructure

Fingerprinting of the underlying web server, hosting, CMS, and DNS infrastructure.

Component	Detected Value
Web Server	nginx/1.31.1
Hosting IP	144.208.74.247
CMS / Generator	Unknown
Frontend Libraries	Bootstrap, Bootstrap CSS, Font Awesome, Google Analytics, Google Tag Manager, jQuery
SPF Record (Email Security)	Configured
DMARC Record (Email Security)	Configured

13. Keyword Analysis (Homepage)

Top keywords and phrases extracted from the homepage text, cross-referenced with crucial on-page SEO elements.

Top Keywords (Unigrams)

KEYWORD	COUNT	IN TITLE	IN DESC	IN H1-H6
diamonds	16	Yes	No	No
amipi	16	Yes	No	Yes
email	12	No	No	No
jewelry	11	Yes	No	No
diamond	9	Yes	No	Yes
price	9	No	No	Yes
certified	7	No	No	No
bracelets	7	No	No	Yes
bangles	7	No	No	Yes
make	7	No	No	No

Top Phrases (Bigrams)

PHRASE	COUNT	IN TITLE	IN DESC	IN H1-H6
natural diamonds	5	No	No	No
bracelets bangles	5	No	No	No
make payment	5	No	No	No
diamonds round	4	No	No	No
round marquise	4	No	No	No
marquise princess	4	No	No	No
princess asscher	4	No	No	No
asscher cushion	4	No	No	No
cushion radiant	4	No	No	No
radiant oval	4	No	No	No

Detailed opportunity analysis

Priority	Issue	Description	Why it matters	Expected improvement	Difficulty
Critical	Reduce unused JavaScript	Reduce unused JavaScript and defer loading scripts until they are required to decrease bytes consumed by network activity. [Learn how to reduce unused JavaScript] (https://developer.chrome.com/docs/lighthouse/performance/unused-javascript/).	Unused JavaScript increases transfer size, parsing time, and main-thread work.	Lower JS transfer, faster parsing, reduced TBT, and improved LCP on script-heavy pages.	Medium
Critical	Reduce unused JavaScript	Reduce unused JavaScript and defer loading scripts until they are required to decrease bytes consumed by network activity. [Learn how to reduce unused JavaScript] (https://developer.chrome.com/docs/lighthouse/performance/unused-javascript/).	Unused JavaScript increases transfer size, parsing time, and main-thread work.	Lower JS transfer, faster parsing, reduced TBT, and improved LCP on script-heavy pages.	Medium
Critical	Reduce initial server response time	Keep the server response time for the main document short because all other requests depend on it. [Learn more about the Time to First Byte metric] (https://developer.chrome.com/docs/lighthouse/performance/time-to-first-byte/).	Slow server response delays every render milestone that depends on the HTML document.	Lower TTFB and faster FCP/LCP.	Hard

Priority	Issue	Description	Why it matters	Expected improvement	Difficulty
Critical	Reduce initial server response time	Keep the server response time for the main document short because all other requests depend on it. [Learn more about the Time to First Byte metric] (https://developer.chrome.com/docs/lighthouse/performance/time-to-first-byte/).	Slow server response delays every render milestone that depends on the HTML document.	Lower TTFB and faster FCP/LCP.	Hard
Critical	Reduce unused CSS	Reduce unused rules from stylesheets and defer CSS not used for above-the-fold content to decrease bytes consumed by network activity. [Learn how to reduce unused CSS] (https://developer.chrome.com/docs/lighthouse/performance/unused-css-rules/).	Unused CSS blocks rendering and adds unnecessary bytes before the page can paint.	Reduced render-blocking CSS and faster FCP/LCP.	Medium
Critical	Reduce unused CSS	Reduce unused rules from stylesheets and defer CSS not used for above-the-fold content to decrease bytes consumed by network activity. [Learn how to reduce unused CSS] (https://developer.chrome.com/docs/lighthouse/performance/unused-css-rules/).	Unused CSS blocks rendering and adds unnecessary bytes before the page can paint.	Reduced render-blocking CSS and faster FCP/LCP.	Medium
Critical	Minify CSS	Minifying CSS files can reduce network payload sizes. [Learn how to minify CSS] (https://developer.chrome.com/docs/lighthouse/performance/unminified-css/).	Unminified CSS sends unnecessary bytes and can slow render-blocking stylesheets.	Reduced CSS transfer size and faster render start.	Easy
Critical	Minimize main-thread work	Consider reducing the time spent parsing, compiling and executing JS. You may find delivering smaller JS payloads helps with this. [Learn how to minimize main-thread work] (https://developer.chrome.com/docs/lighthouse/performance/mainthread-work-breakdown/)	Heavy main-thread work delays rendering and blocks user input.	Reduced TBT and faster interaction readiness.	Hard
Critical	Minimize main-thread work	Consider reducing the time spent parsing, compiling and executing JS. You may find delivering smaller JS payloads helps with this. [Learn how to minimize main-thread work] (https://developer.chrome.com/docs/lighthouse/performance/mainthread-work-breakdown/)	Heavy main-thread work delays rendering and blocks user input.	Reduced TBT and faster interaction readiness.	Hard
Critical	Reduce JavaScript execution time	Consider reducing the time spent parsing, compiling, and executing JS. You may find delivering smaller JS payloads helps with this. [Learn how to reduce Javascript execution time] (https://developer.chrome.com/docs/lighthouse/performance/boottup-time/).	Expensive JavaScript boot-up blocks the main thread during load.	Lower TBT and faster interactive readiness.	Hard
Critical	Reduce JavaScript execution time	Consider reducing the time spent parsing, compiling, and executing JS. You may find delivering smaller JS payloads helps with this. [Learn how to	Expensive JavaScript boot-up blocks the main thread during load.	Lower TBT and faster interactive readiness.	Hard

Priority	Issue	Description	Why it matters	Expected improvement	Difficulty
		reduce Javascript execution time] (https://developer.chrome.com/docs/lighthouse/performance/boottup-time/).			
High	Minify JavaScript	Minifying JavaScript files can reduce payload sizes and script parse time. [Learn how to minify JavaScript] (https://developer.chrome.com/docs/lighthouse/performance/unminified-javascript/).	Unminified JavaScript increases transfer size and parse cost.	Reduced JS transfer and parse time.	Easy
High	Minify JavaScript	Minifying JavaScript files can reduce payload sizes and script parse time. [Learn how to minify JavaScript] (https://developer.chrome.com/docs/lighthouse/performance/unminified-javascript/).	Unminified JavaScript increases transfer size and parse cost.	Reduced JS transfer and parse time.	Easy
High	Minify CSS	Minifying CSS files can reduce network payload sizes. [Learn how to minify CSS] (https://developer.chrome.com/docs/lighthouse/performance/unminified-css/).	Unminified CSS sends unnecessary bytes and can slow render-blocking stylesheets.	Reduced CSS transfer size and faster render start.	Easy
High	Avoid enormous network payloads	Large network payloads cost users real money and are highly correlated with long load times. [Learn how to reduce payload sizes] (https://developer.chrome.com/docs/lighthouse/performance/total-byte-weight/).	Large total transfer size slows page load and hurts users on slower connections.	Lower page weight and faster load time.	Medium
High	Avoid enormous network payloads	Large network payloads cost users real money and are highly correlated with long load times. [Learn how to reduce payload sizes] (https://developer.chrome.com/docs/lighthouse/performance/total-byte-weight/).	Large total transfer size slows page load and hurts users on slower connections.	Lower page weight and faster load time.	Medium
Low	Avoid large layout shifts	These are the largest layout shifts observed on the page. Each table item represents a single layout shift, and shows the element that shifted the most. Below each item are possible root causes that led to the layout shift. Some of these layout shifts may not be included in the CLS metric value due to [windowing] (https://web.dev/articles/cls#what_is_cls). [Learn how to improve CLS] (https://web.dev/articles/optimize-cls)	Layout shifts create visual instability and can hurt Page Experience.	Lower CLS and a more stable user experience.	Medium
Low	Avoid large layout shifts	These are the largest layout shifts observed on the page. Each table item represents a single layout shift, and shows the element that shifted the most. Below each item are possible root causes that led to the layout shift. Some of these layout shifts may not be	Layout shifts create visual instability and can hurt Page Experience. 		included in the CLS metric value due to [windowing] (https://web.dev/articles/cls#what_is_cls). [Learn how to improve CLS] (https://web.dev/articles/optimize-cls)			
Low	Avoid long main-thread tasks	Lists the longest tasks on the main thread, useful for identifying worst contributors to input delay. [Learn how to avoid long main-thread tasks] (https://web.dev/articles/optimize-long-tasks)	Long tasks block the browser from responding quickly to user input.	Lower TBT and smoother interaction readiness.	Hard
Low	Avoid long main-thread tasks	Lists the longest tasks on the main thread, useful for identifying worst contributors to input delay. [Learn how to avoid long main-thread tasks] (https://web.dev/articles/optimize-long-tasks)	Long tasks block the browser from responding quickly to user input.	Lower TBT and smoother interaction readiness.	Hard
Data Not Available	CDN Usage Recommendations	Data Not Available	A CDN can reduce latency by serving static assets closer to users.	Reduced latency for static resources when CDN coverage is applicable.	Medium
Data Not Available	Cache Policy / Efficient Cache Lifetime	Data Not Available	Short cache lifetimes force repeat visitors to re-download static assets.	Faster repeat visits and reduced network transfer.	Easy
Data Not Available	Critical Request Chains	Data Not Available	Long dependency chains delay discovery of render-critical resources.	Earlier rendering and improved FCP/LCP.	Hard
Data Not Available	Excessive DOM Size	Data Not Available	Large DOMs increase style calculation, layout work, memory use, and interaction latency.	Less main-thread work and better interaction responsiveness.	Hard
Data Not Available	Legacy JavaScript Serving	Data Not Available	Legacy JavaScript sends extra code to modern browsers and increases parse/compile work.	Smaller JavaScript payloads and reduced main-thread work.	Medium
Data Not Available	Network Dependency Analysis	Data Not Available	A complex dependency tree delays important requests and amplifies latency.	Shorter critical path and faster content rendering.	Hard
Data Not Available	Next-Generation Image Formats (WebP/AVIF)	Data Not Available	Legacy image formats are often larger than WebP or AVIF equivalents.	Reduced image bytes and faster visual loading.	Medium
Data Not Available	Offscreen Image Deferral (Lazy Loading)	Data Not Available	Below-the-fold images compete with above-the-fold content for bandwidth.	Fewer initial requests and faster first viewport rendering.	Easy
Data Not Available	Properly Sized Images	Data Not Available	Oversized images waste bandwidth and delay LCP, especially on mobile.	Lower image transfer and faster LCP.	Medium
Data Not Available	Render Blocking Resources	Data Not Available	Blocking CSS and synchronous scripts delay first paint and LCP.	Faster FCP and LCP.	Medium

Priority	Issue	Description	Why it matters	Expected improvement	Difficulty
Data Not Available	Third-party Code Impact	Data Not Available	Third-party scripts can block the main thread and add network latency outside your release control.	Reduced main-thread blocking and fewer competing network requests.	Medium
Data Not Available	font-display Optimization	Data Not Available	Web fonts can hide text while downloading, delaying readable content.	Text appears sooner and perceived performance improves.	Easy

GTmetrix Top Issues & Prioritized Recommendations

This table follows the GTmetrix Top Issues style as closely as possible using actual Lighthouse/PageSpeed values when available. GTmetrix-only values are marked as Data Not Available unless a GTmetrix data source is connected.

RANK	ISSUE NAME	SEVERITY	AFFECTED PAGES	TIME SAVINGS	SIZE SAVINGS	DIFFICULTY	EXPECTED GAIN
#1	Reduce unused JavaScript	Critical	https://www.amipi.com (mobile)	3.2s	1.2 MB	Medium	Lower JS transfer, faster parsing, reduced TBT, and improved LCP on script-heavy pages.
GTmetrix recommendation: Remove unused scripts, split bundles by route, defer non-critical code, and load features only when needed.							
#2	Reduce unused JavaScript	Critical	https://www.amipi.com (desktop)	630ms	1.2 MB	Medium	Lower JS transfer, faster parsing, reduced TBT, and improved LCP on script-heavy pages.
GTmetrix recommendation: Remove unused scripts, split bundles by route, defer non-critical code, and load features only when needed.							
#3	Reduce initial server response time	Critical	https://www.amipi.com (desktop)	546ms	Data Not Available	Hard	Lower TTFB and faster FCP/LCP.
GTmetrix recommendation: Add server-side caching, optimize database queries, tune hosting, and use edge caching where appropriate.							
#4	Reduce initial server response time	Critical	https://www.amipi.com (mobile)	541ms	Data Not Available	Hard	Lower TTFB and faster FCP/LCP.
GTmetrix recommendation: Add server-side caching, optimize database queries, tune hosting, and use edge caching where appropriate.							
#5	Reduce unused CSS	Critical	https://www.amipi.com (mobile)	450ms	133 KB	Medium	Reduced render-blocking CSS and faster FCP/LCP.
GTmetrix recommendation: Remove unused selectors, split critical CSS, and load non-critical styles after first render.							
#6	Reduce unused CSS	Critical	https://www.amipi.com (desktop)	80ms	135 KB	Medium	Reduced render-blocking CSS and faster FCP/LCP.
GTmetrix recommendation: Remove unused selectors, split critical CSS, and load non-critical styles after first render.							
#7	Minify CSS	Critical	https://www.amipi.com (mobile)	Data Not Available	14 KB	Easy	Reduced CSS transfer size and faster render start.

RANK	ISSUE NAME	SEVERITY	AFFECTED PAGES	TIME SAVINGS	SIZE SAVINGS	DIFFICULTY	EXPECTED GAIN
GTmetrix recommendation: Minify CSS in the build pipeline and serve compressed production assets.							
#8	Minimize main-thread work	Critical	https://www.amipi.com (desktop)	Data Not Available	Data Not Available	Hard	Reduced TBT and faster interaction readiness.
GTmetrix recommendation: Reduce script execution, split long tasks, move expensive work off-thread, and simplify layout work.							
#9	Minimize main-thread work	Critical	https://www.amipi.com (mobile)	Data Not Available	Data Not Available	Hard	Reduced TBT and faster interaction readiness.
GTmetrix recommendation: Reduce script execution, split long tasks, move expensive work off-thread, and simplify layout work.							
#10	Reduce JavaScript execution time	Critical	https://www.amipi.com (desktop)	Data Not Available	Data Not Available	Hard	Lower TBT and faster interactive readiness.
GTmetrix recommendation: Trim third-party scripts, defer non-critical JavaScript, and break large bundles into smaller chunks.							
#11	Reduce JavaScript execution time	Critical	https://www.amipi.com (mobile)	Data Not Available	Data Not Available	Hard	Lower TBT and faster interactive readiness.
GTmetrix recommendation: Trim third-party scripts, defer non-critical JavaScript, and break large bundles into smaller chunks.							
#12	Minify JavaScript	High	https://www.amipi.com (mobile)	Data Not Available	45 KB	Easy	Reduced JS transfer and parse time.
GTmetrix recommendation: Minify JavaScript in the production build and remove source-only code from served bundles.							
#13	Minify JavaScript	High	https://www.amipi.com (desktop)	Data Not Available	45 KB	Easy	Reduced JS transfer and parse time.
GTmetrix recommendation: Minify JavaScript in the production build and remove source-only code from served bundles.							
#14	Minify CSS	High	https://www.amipi.com (desktop)	Data Not Available	14 KB	Easy	Reduced CSS transfer size and faster render start.
GTmetrix recommendation: Minify CSS in the build pipeline and serve compressed production assets.							
#15	Avoid enormous network payloads	High	https://www.amipi.com (desktop)	Data Not Available	Data Not Available	Medium	Lower page weight and faster load time.
GTmetrix recommendation: Compress assets, remove unused code, optimize images, and audit third-party payloads.							
#16	Avoid enormous network payloads	High	https://www.amipi.com (mobile)	Data Not Available	Data Not Available	Medium	Lower page weight and faster load time.
GTmetrix recommendation: Compress assets, remove unused code, optimize images, and audit third-party payloads.							

Consolidated Optimization Roadmap

Roadmap sorted by priority and measured savings where data is available.

Priority	Optimization	Time Savings	Data Savings	Difficulty	SEO Impact	Performance Impact	Estimated Lighthouse Score Improvement
Critical	Reduce unused JavaScript	3.2s	1.2 MB	Medium	Medium	High	Data Not Available
Critical	Reduce unused JavaScript	630ms	1.2 MB	Medium	Medium	High	Data Not Available
Critical	Reduce initial server response time	546ms	Data Not Available	Hard	High	High	Data Not Available
Critical	Reduce initial server response time	541ms	Data Not Available	Hard	High	High	Data Not Available
Critical	Reduce unused CSS	450ms	133 KB	Medium	Low	Medium	Data Not Available
Critical	Reduce unused CSS	80ms	135 KB	Medium	Low	Medium	Data Not Available
Critical	Minify CSS	Data Not Available	14 KB	Easy	Low	Low	Data Not Available
Critical	Minimize main-thread work	Data Not Available	Data Not Available	Hard	Medium	High	Data Not Available
Critical	Minimize main-thread work	Data Not Available	Data Not Available	Hard	Medium	High	Data Not Available
Critical	Reduce JavaScript execution time	Data Not Available	Data Not Available	Hard	Medium	High	Data Not Available
Critical	Reduce JavaScript execution time	Data Not Available	Data Not Available	Hard	Medium	High	Data Not Available
High	Minify JavaScript	Data Not Available	45 KB	Easy	Low	Medium	Data Not Available
High	Minify JavaScript	Data Not Available	45 KB	Easy	Low	Medium	Data Not Available
High	Minify CSS	Data Not Available	14 KB	Easy	Low	Low	Data Not Available
High	Avoid enormous network payloads	Data Not Available	Data Not Available	Medium	Medium	High	Data Not Available
High	Avoid enormous network payloads	Data Not Available	Data Not Available	Medium	Medium	High	Data Not Available
Low	Avoid large layout shifts	Data Not Available	Data Not Available	Medium	Medium	Medium	Data Not Available

15. Complete Findings Inventory (Export)

The full list of all **5370** findings across every single URL has been moved to a separate spreadsheet attachment to keep this document concise.

Full findings (5370 rows): see attached `amipi_findings_20260714_152501.csv`

16. Methodology & Limitations

Breadth-first internal crawl with static HTML inspection, response timing, payload measurement, technical SEO, metadata, accessibility, content, URL, and performance checks. Note: Scoring is derived from an internal crawl methodology and is not directly equivalent to third-party audit tool scores.

- Performance values are server-response and HTML payload measurements, not a Lighthouse lab run; LCP, CLS, INP, and TBT require browser instrumentation.
- Accessibility checks cover detectable markup only and do not replace keyboard, screen-reader, contrast, or WCAG conformance testing.
- Backlink authority, rankings, and traffic require external search-provider data and are not inferred by this crawler.

Run window: 2026-07-14T15:02:49.297280+00:00 to 2026-07-14T15:23:56.362333+00:00
