Full findings (2266 rows): see attached `amipi_findings_20260708_115239.csv`

16. Methodology & Limitations

Breadth-first internal crawl with static HTML inspection, response timing, payload measurement, technical SEO, metadata, accessibility, content, URL, and performance checks.

- Performance values are server-response and HTML payload measurements, not a Lighthouse lab run; LCP, CLS, INP, and TBT require browser instrumentation.
- Accessibility checks cover detectable markup only and do not replace keyboard, screen-reader, contrast, or WCAG conformance testing.
- Backlink authority, rankings, and traffic require external search-provider data and are not inferred by this crawler.
