

Website Performance, SEO & Technical Health Report

<https://www.amipi.com>

1. Executive Summary

The audit of amipi.com reveals 3,850 issues across 72 pages, with critical performance and SEO gaps. The site suffers from very slow server response times (over 15 seconds) and nearly 1,000 broken resource requests, which severely hurt user experience and search rankings. Additionally, most pages lack essential SEO elements like meta descriptions, canonical tags, and structured data, while one page is missing a title tag entirely. Fixing these high-impact issues will dramatically improve crawlability, page speed, and search visibility.

Audit scope: Breadth-first internal crawl with static HTML inspection, response timing, payload measurement, technical SEO, metadata, accessibility, content, URL, and performance checks. Note: Scoring is derived from an internal crawl methodology and is not directly equivalent to third-party audit tool scores.

Top Priorities & What Needs To Be Done

- slow_response_time**
Why it matters: Server response times averaging 15+ seconds cause high bounce rates, poor Core Web Vitals, and lower search rankings.
To do: Optimize server configuration, enable caching, and investigate backend bottlenecks to bring response time under 200ms.
- broken_resource**
Why it matters: 929 broken resource requests (404s) waste crawl budget, slow page loads, and create a poor user experience.
To do: Audit and fix all broken resource URLs; implement monitoring to catch new 404s quickly.
- missing_meta_description**
Why it matters: 97 pages lack meta descriptions, reducing click-through rates from search results and social shares.
To do: Add unique, compelling meta descriptions (150-160 chars) to every indexable page.
- missing_canonical_tag**
Why it matters: Without canonical tags on 97 pages, duplicate content risks dilute ranking signals and confuse search engines.
To do: Implement self-referencing canonical tags on all pages and ensure correct cross-domain canonicalization where needed.
- missing_structured_data**
Why it matters: Absence of JSON-LD schema on 97 pages prevents rich results, reducing visibility and click-through in SERPs.
To do: Deploy relevant schema markup (Organization, WebSite, Article, Product, etc.) using JSON-LD.
- render_blocking_scripts**
Why it matters: 18 render-blocking scripts per page delay First Contentful Paint and degrade Core Web Vitals.
To do: Add async/defer attributes to non-critical scripts, inline critical CSS, and defer non-essential JavaScript.
- missing_title**
Why it matters: A missing <title> tag on at least one page makes it invisible to search engines and users in SERPs.
To do: Ensure every page has a unique, descriptive title tag (50-60 characters) with primary keywords.
- missing_h1_tag**
Why it matters: 27 pages lack an H1 heading, weakening topical relevance signals and accessibility for screen readers.
To do: Add a single, keyword-rich H1 to each page that accurately reflects the main content.

2. Issues Fixed Since Last Run

✓ 3 issues resolved since the last audit. Great progress!

CATEGORY	PAGES	ISSUE & SAMPLES	RECOMMENDATION FOLLOWED
Broken Links	2	Broken resource (a): HTTP 400 https://www.amipi.com/certified.php/ https://www.amipi.com/br-test/	Problem detected on https://www.amipi.com/certified.php/?IsSingleDiamond=1&DiamondType=1 : Broken resource (a): HTTP 400. Current target/value: https://www.facebook.com/Amipi-Diamonds-166389680059646/?fref=nf . Replace it with the current external destination, cite an alternative authoritative source, or remove the link if it is no longer needed.
Broken Links	1	Broken resource (a): HTTP 403 (Anti-Bot/Access Denied) https://www.amipi.com/certified.php/	Problem detected on https://www.amipi.com/certified.php/?IsSingleDiamond=1&DiamondType=1 : Broken resource (a): HTTP 403 (Anti-Bot/Access Denied). Current target/value: https://www.americangemsociety.org/ . Because the target blocks automated checks, manually verify it in a browser; if it is not essential, replace it with a stable source that returns 200 for normal crawlers.
Performance	2	High resource count on page: 101 (scripts/CSS/images) https://www.amipi.com https://www.amipi.com/pay/check/payments@amipi.com	https://www.amipi.com has too many page resources. Current value: High resource count on page: 101 (scripts/CSS/images); detected breakdown: 31 scripts, 21 stylesheets, 49 images. Bundle or remove duplicate JS/CSS, lazy-load below-the-fold images, and defer non-critical third-party scripts on this page.

3. New Issues Identified

⚠ 4 new issues detected since the last audit. These require review.

SEVERITY	CATEGORY	PAGES	ISSUE & SAMPLES
MEDIUM	Broken Links	2	Broken resource (a): HTTP 400 Target: https://www.facebook.com/Amipi-Diamonds-166389680059646/?fref=nf (Found on 47 pages) https://www.amipi.com/rings/ https://www.amipi.com/
MEDIUM	Performance	1	Slow response time: 2894ms https://www.amipi.com/My-Wishlist/
LOW	Broken Links	1	Broken resource (a): HTTP 403 (Anti-Bot/Access Denied) Target: https://www.americangemsociety.org/ (Found on 48 pages) https://www.amipi.com/rings/

SEVERITY	CATEGORY	PAGES	ISSUE & SAMPLES
LOW	Performance	2	High resource count on page: 102 (scripts/CSS/images) https://www.amipi.com/compare-product.php https://www.amipi.com/index.php

4. Persisting Issues

33 issues persisting from the last audit. These should be addressed.

SEVERITY	CATEGORY	PAGES	ISSUE & SAMPLES
CRITICAL	Metadata	1	Missing <title> tag https://www.amipi.com/My-Wishlist/
CRITICAL	Performance	48	Very slow response time: 15683ms https://www.amipi.com https://www.amipi.com//sell/ https://www.amipi.com/basics/ https://www.amipi.com/ https://www.amipi.com/studs/
MEDIUM	Accessibility	48	Document language is not declared Add a valid lang attribute to <html>. https://www.amipi.com https://www.amipi.com//sell/ https://www.amipi.com/basics/ https://www.amipi.com/ https://www.amipi.com/studs/
MEDIUM	Accessibility	48	15 links have no accessible name Add visible link text or an aria-label. https://www.amipi.com https://www.amipi.com//sell/ https://www.amipi.com/basics/ https://www.amipi.com/ https://www.amipi.com/studs/

Security	A	95/100	2	1	Visitor safety and browser trust

7. Prioritized Remediation Plan

The plan groups recurring findings into implementable work rather than listing hundreds of duplicate rows.

0–30 days

CRITICAL Missing <title> tag

Why it matters: Search relevance and click-through rate

Recommended action: Create unique titles, descriptions, canonicals, and one clear H1 per indexable page.

Coverage: 1 affected page(s)

<https://www.amipi.com/My-Wishlist/>

CRITICAL Very slow response time: 10064ms

Why it matters: User experience, conversion, and Core Web Vitals

Recommended action: Reduce server time, defer non-critical JavaScript, compress media, and cache assets.

Coverage: 1 affected page(s)

<https://www.amipi.com/rings/>

CRITICAL Very slow response time: 10134ms

Why it matters: User experience, conversion, and Core Web Vitals

Recommended action: Reduce server time, defer non-critical JavaScript, compress media, and cache assets.

Coverage: 1 affected page(s)

8. Detailed Findings by Category

User experience, conversion, and Core Web Vitals

Recommended approach: Reduce server time, defer non-critical JavaScript, compress media, and cache assets.

SEVERITY	AFFECTED PAGES	FINDING & SAMPLES	RECOMMENDED FIX
CRITICAL VIEWPORT: DESKTOP, MOBILE	49	Very slow response time: 15683ms https://www.amipi.com https://www.amipi.com/sell/ https://www.amipi.com/basics/ https://www.amipi.com/ https://www.amipi.com/studs/	https://www.amipi.com is slow at crawl time. Current value: Very slow response time: 15683ms. Cache the generated HTML for this page, reduce backend/database work for its route, and serve static assets through the CDN. The immediate target is under 1000ms response time, with critical pages ideally below 500ms.
MEDIUM VIEWPORT: DESKTOP, MOBILE	47	18 render-blocking <script> tags (no async/defer) https://www.amipi.com https://www.amipi.com/sell/ https://www.amipi.com/basics/ https://www.amipi.com/ https://www.amipi.com/studs/	https://www.amipi.com has render-blocking scripts. Current value: 18 render-blocking <script> tags (no async/defer). Add defer to non-critical scripts such as https://www.google.com/recaptcha/api.js , https://www.googletagmanager.com/gtag/js?id=G-HZMFWWPNL5 , https://www.googletagmanager.com/gtag/js?id=AW-16743265799 , https://s3.amazonaws.com/downloads.mailchimp.com/js/mc-validate.js , and keep only scripts required for first paint synchronous. This reduces parser blocking and improves first render/LCP timing.
LOW VIEWPORT: DESKTOP, MOBILE	27	High resource count on page: 108 (scripts/CSS/images) https://www.amipi.com/basics/ https://www.amipi.com/studs/ https://www.amipi.com/hoops/ https://www.amipi.com/certified.php/ (and 3 variants) https://www.amipi.com/bracelets/	https://www.amipi.com/basics/ has too many page resources. Current value: High resource count on page: 108 (scripts/CSS/images); detected breakdown: 33 scripts, 24 stylesheets, 51 images. Bundle or remove duplicate JS/CSS, lazy-load below-the-fold images, and defer non-critical third-party scripts on this page.
LOW VIEWPORT: DESKTOP, MOBILE	47	Large third-party script loaded: 159.6KB URL: https://www.googletagmanager.com/gtag/js?id=G-HZMFWWPNL5 https://www.amipi.com/sell/ https://www.amipi.com/basics/ https://www.amipi.com/ https://www.amipi.com/studs/ https://www.amipi.com/hoops/	https://www.amipi.com/sell/ loads a large third-party script: https://www.googletagmanager.com/gtag/js?id=G-HZMFWWPNL5 . Current value: Large third-party script loaded: 159.6KB. Load it after consent or interaction where possible, add defer/async, and remove it from this page if it is not required for conversion tracking or functionality.
MEDIUM VIEWPORT: DESKTOP, MOBILE	47	Broken resource request (404) on page Resource: https://www.amipi.com/product_thumb.php?img=images/category_navigation_image/2020082717214984021_Main_W.jpg&w=150&h=150 https://www.amipi.com/sell/ https://www.amipi.com/basics/ https://www.amipi.com/ https://www.amipi.com/studs/ https://www.amipi.com/hoops/	https://www.amipi.com/sell/ requests a missing asset: https://www.amipi.com/product_thumb.php?img=images/category_navigation_image/2020082717214984021_Main_W.jpg&w=150&h=150 . Replace the reference with the correct asset URL, restore the missing file, or remove the tag if the asset is no longer used. A 404 asset wastes requests and can break visual layout, tracking, or interactive behavior.
MEDIUM VIEWPORT: DESKTOP, MOBILE	48	Heavy JavaScript payload: 1.3MB https://www.amipi.com/sell/ https://www.amipi.com/basics/ https://www.amipi.com/ https://www.amipi.com/studs/ https://www.amipi.com/hoops/	https://www.amipi.com/sell/ ships too much JavaScript. Current value: Heavy JavaScript payload: 1.3MB. Review the largest scripts first: https://www.amipi.com/js/jquery-ui.js (460 KB), https://www.googletagmanager.com/gtag/js?id=G-HZMFWWPNL5&cx=c&gtm=4e67d1h2 (160 KB), https://www.googletagmanager.com/gtag/js?id=G-HZMFWWPNL5 (160 KB), https://www.googletagmanager.com/gtm.js?id=GTM-NR57JL4L (146 KB). Remove unused libraries, split page-specific code, and defer non-critical bundles.

Search relevance and click-through rate

Recommended approach: Create unique titles, descriptions, canonicals, and one clear H1 per indexable page.

SEVERITY	AFFECTED PAGES	FINDING & SAMPLES	RECOMMENDED FIX
LOW VIEWPORT: DESKTOP, MOBILE	34	Title length is 45 chars (recommended 50-60) Wholesale Diamonds & Fine Jewelry AMIPI Inc https://www.amipi.com https://www.amipi.com/basics/ https://www.amipi.com/ https://www.amipi.com/studs/ https://www.amipi.com/hoops/	Current title on https://www.amipi.com : "Wholesale Diamonds & Fine Jewelry AMIPI Inc" (45 characters). Recommended replacement (62 characters): "START YOUR DIAMOND SEARCH HERE Diamonds Round Marquise AMIPI". The replacement keeps the page topic and brand visible while moving the title closer to the 50-60 character range used in the audit.
MEDIUM VIEWPORT: DESKTOP, MOBILE	49	Missing meta description https://www.amipi.com https://www.amipi.com//sell/ https://www.amipi.com/basics/ https://www.amipi.com/ https://www.amipi.com/studs/	https://www.amipi.com currently has no meta description. Recommended meta description (129 characters): "Explore START YOUR DIAMOND SEARCH HERE from AMIPI, including key services, product information, and helpful details for visitors.". This summary is based on the page content and gives search/social snippets a specific value proposition instead of leaving the snippet to be auto-generated.
MEDIUM VIEWPORT: DESKTOP, MOBILE	49	Missing canonical tag https://www.amipi.com https://www.amipi.com//sell/ https://www.amipi.com/basics/ https://www.amipi.com/ https://www.amipi.com/studs/	https://www.amipi.com does not expose a clean preferred URL for search engines. Add or update the canonical tag to: <link rel="canonical" href="https://www.amipi.com/">. This consolidates ranking signals and prevents duplicate URL variants from competing with this page.
LOW VIEWPORT: DESKTOP, MOBILE	48	Missing lang attribute on <html> https://www.amipi.com https://www.amipi.com//sell/ https://www.amipi.com/basics/ https://www.amipi.com/ https://www.amipi.com/studs/	https://www.amipi.com is missing the document language declaration. Current value: no lang attribute detected. Set the root element to <html lang="en">, or replace "en" with the actual primary page language. This improves accessibility pronunciation and search engine language interpretation.
MEDIUM VIEWPORT: DESKTOP, MOBILE	14	Missing H1 tag https://www.amipi.com/basics/ https://www.amipi.com/studs/ https://www.amipi.com/hoops/ https://www.amipi.com/certified.php/ https://www.amipi.com/bracelets/	https://www.amipi.com/basics/ currently has no H1. Recommended H1: "Diamond Jewelry Basics Wholesale AMIPI Inc". This gives users and crawlers one clear primary heading that matches the page topic instead of forcing them to infer the subject from smaller headings or navigation.
CRITICAL VIEWPORT: DESKTOP	1	Missing <title> tag https://www.amipi.com/My-Wishlist/	https://www.amipi.com/My-Wishlist/ currently has no <title> tag. Recommended title (19 characters): "My Wishlist AMIPI". This gives the page a specific search result headline based on its content and keeps the title close to the recommended display length.

Reliable previews and referral engagement

Recommended approach: Add unique Open Graph and Twitter/X card tags.

SEVERITY	AFFECTED PAGES	FINDING & SAMPLES	RECOMMENDED FIX
LOW VIEWPORT: DESKTOP, MOBILE	49	Missing Open Graph title Add og:title for reliable social previews. https://www.amipi.com https://www.amipi.com//sell/ https://www.amipi.com/basics/ https://www.amipi.com/ https://www.amipi.com/studs/	https://www.amipi.com is missing og:title. Add <meta property="og:title" content="Wholesale Diamonds & Fine Jewelry AMIPI Inc"> so shared links use the page-specific title instead of a platform-generated fallback.
LOW VIEWPORT: DESKTOP, MOBILE	49	Missing Open Graph description Add og:description using the page's unique value proposition. https://www.amipi.com https://www.amipi.com//sell/ https://www.amipi.com/basics/ https://www.amipi.com/ https://www.amipi.com/studs/	https://www.amipi.com is missing og:description. Add <meta property="og:description" content="Explore AMIPI Inc for high-quality wholesale diamonds and fine jewelry. Trusted by retailers for exceptional craftsmanship and service."> so social previews explain this page's value using the same page-specific message as search snippets.
LOW VIEWPORT: DESKTOP, MOBILE	49	Missing Twitter/X card metadata Add twitter:card and related sharing tags. https://www.amipi.com https://www.amipi.com//sell/ https://www.amipi.com/basics/ https://www.amipi.com/ https://www.amipi.com/studs/	https://www.amipi.com is missing Twitter/X card metadata. Add <meta name="twitter:card" content="summary_large_image"> plus twitter:title="Wholesale Diamonds & Fine Jewelry AMIPI Inc" and twitter:description="Explore AMIPI Inc for high-quality wholesale diamonds and fine jewelry. Trusted by retailers for exceptional craftsmanship and service." so X displays a complete preview.

Accessibility

C 286 findings

Inclusive use and WCAG alignment

Recommended approach: Correct semantic and accessible-name issues, then validate with keyboard and screen-reader testing.

SEVERITY	AFFECTED PAGES	FINDING & SAMPLES	RECOMMENDED FIX
MEDIUM VIEWPORT: DESKTOP, MOBILE	48	Document language is not declared Add a valid lang attribute to <html>. https://www.amipi.com https://www.amipi.com//sell/ https://www.amipi.com/basics/ https://www.amipi.com/ https://www.amipi.com/studs/	https://www.amipi.com is missing the document language declaration. Current value: no lang attribute detected. Set the root element to <html lang="en">, or replace "en" with the actual primary page language. This improves accessibility pronunciation and search engine language interpretation.
MEDIUM VIEWPORT: DESKTOP, MOBILE	48	15 links have no accessible name Add visible link text or an aria-label. https://www.amipi.com https://www.amipi.com//sell/ https://www.amipi.com/basics/ https://www.amipi.com/ https://www.amipi.com/studs/	https://www.amipi.com contains links without accessible names. Current value: 15 links have no accessible name. Add visible text or aria-label values that describe each destination, for example aria-label="View Homepage details" for icon-only links. This makes the exact link purpose available to screen readers.
MEDIUM VIEWPORT: DESKTOP, MOBILE	48	94 form controls lack labels Associate each control with a label or aria-label. https://www.amipi.com https://www.amipi.com//sell/ https://www.amipi.com/basics/ https://www.amipi.com/ https://www.amipi.com/studs/	https://www.amipi.com contains form controls without labels. Current value: 94 form controls lack labels. Add <label for="field-id">Descriptive field name</label> or aria-label on each specific input, using the field purpose visible near that control. This prevents screen reader users from encountering unnamed fields.

ALT Tags

A 250 findings

Accessibility and image search

Recommended approach: Add concise, descriptive ALT text; use empty ALT only for decorative images.

SEVERITY	AFFECTED PAGES	FINDING & SAMPLES	RECOMMENDED FIX
LOW VIEWPORT: DESKTOP, MOBILE	47	Image missing ALT attribute https://amipi.com/images/footer-logo/jewelry-f.png https://www.amipi.com https://www.amipi.com//sell/ https://www.amipi.com/basics/ https://www.amipi.com/ https://www.amipi.com/studs/	Image missing ALT text on https://www.amipi.com: https://amipi.com/images/footer-logo/jewelry-f.png. Recommended ALT text: "Jewelry f". This describes the specific image using nearby page context and filename signals, improving accessibility and image search relevance.

Indexation and rich search results

Recommended approach: Implement sitemap, robots, canonical, and appropriate Schema.org markup.

SEVERITY	AFFECTED PAGES	FINDING & SAMPLES	RECOMMENDED FIX
LOW VIEWPORT: DESKTOP, MOBILE	1	Sitemap URL is not declared in robots.txt https://www.amipi.com/robots.txt	https://www.amipi.com/robots.txt exists but does not declare the sitemap. Add this line to robots.txt: Sitemap: https://www.amipi.com/sitemap.xml . This gives crawlers a direct route to the canonical URL inventory.
MEDIUM VIEWPORT: DESKTOP, MOBILE	49	No recognized Structured Data (JSON-LD schema) found Consider adding Organization, Product, or BreadcrumbList schema. https://www.amipi.com https://www.amipi.com//sell/ https://www.amipi.com/basics/ https://www.amipi.com/ https://www.amipi.com/studs/	https://www.amipi.com has no recognized JSON-LD structured data. Add Organization schema tied to this page, for example <pre>{"@context":"https://schema.org","@type":"Organization","name":"START YOUR DIAMOND SEARCH HERE","url":"https://www.amipi.com/","publisher":{"@type":"Organization","name":"AMIPi"}}</pre> . This gives search engines and AI crawlers an explicit entity/page relationship instead of relying only on visible text.

Broken Links

Crawlability & trust

Recommended approach: Repair the source URL or update references to the final 200-status destination.

SEVERITY	AFFECTED PAGES	FINDING & SAMPLES	RECOMMENDED FIX
MEDIUM VIEWPORT: DESKTOP, MOBILE	23	Crawling blocked by robots.txt This URL cannot be crawled or indexed. https://www.amipi.com/diamonds/ (and 22 variants)	Problem detected on https://www.amipi.com/diamonds/ : Crawling blocked by robots.txt. Current target/value: https://www.amipi.com/diamonds/ . If https://www.amipi.com/diamonds/ should be audited or indexed, update robots.txt to allow this path; otherwise remove it from crawl targets and XML sitemaps.
LOW VIEWPORT: DESKTOP, MOBILE	1	Broken resource (a): HTTP 403 (Anti-Bot/Access Denied) Target: https://www.americangemsociety.org/ (Found on 48 pages) https://www.amipi.com/rings/	Problem detected on https://www.amipi.com/rings/ : Broken resource (a): HTTP 403 (Anti-Bot/Access Denied). Current target/value: https://www.americangemsociety.org/ . Because the target blocks automated checks, manually verify it in a browser; if it is not essential, replace it with a stable source that returns 200 for normal crawlers.
MEDIUM VIEWPORT: DESKTOP, MOBILE	3	Broken resource (a): HTTP 400 Target: https://www.facebook.com/Amipi-Diamonds-166389680059646/?fref=nf (Found on 47 pages) https://www.amipi.com/rings/ https://www.amipi.com/ https://www.amipi.com/bands/	Problem detected on https://www.amipi.com/rings/ : Broken resource (a): HTTP 400. Current target/value: https://www.facebook.com/Amipi-Diamonds-166389680059646/?fref=nf . Replace it with the current external destination, cite an alternative authoritative source, or remove the link if it is no longer needed.

URL Structure

A 13 findings

Duplicate prevention and crawl efficiency

Recommended approach: Normalize URL casing and slashes, enforce one canonical version, and redirect alternatives.

SEVERITY	AFFECTED PAGES	FINDING & SAMPLES	RECOMMENDED FIX
MEDIUM VIEWPORT: DESKTOP, MOBILE	1	URL contains repeated slashes Redirect to one normalized URL and update internal links. https://www.amipi.com//sell/	https://www.amipi.com//sell/ does not expose a clean preferred URL for search engines. Add or update the canonical tag to: <link rel="canonical" href="https://www.amipi.com/sell/">. This consolidates ranking signals and prevents duplicate URL variants from competing with this page.
LOW VIEWPORT: DESKTOP, MOBILE	6	URL contains uppercase characters Use lowercase canonical URLs consistently. https://www.amipi.com/Testimonials/ https://www.amipi.com/Contact-Us/ https://www.amipi.com/Schedule-Appointment/ https://www.amipi.com/My-Cart/ https://www.amipi.com/Privacy-Policy/	https://www.amipi.com/Testimonials/ does not expose a clean preferred URL for search engines. Add or update the canonical tag to: <link rel="canonical" href="https://www.amipi.com/testimonials/">. This consolidates ranking signals and prevents duplicate URL variants from competing with this page.

Content

A 10 findings

Organic relevance and customer confidence

Recommended approach: Expand thin landing pages with useful copy, FAQs, headings, and contextual internal links.

SEVERITY	AFFECTED PAGES	FINDING & SAMPLES	RECOMMENDED FIX
MEDIUM VIEWPORT: DESKTOP, MOBILE	2	Thin page content: approximately 126 words Add useful, intent-focused copy, FAQs, and internal links. https://www.amipi.com/bands/ https://www.amipi.com/My-Wishlist/	https://www.amipi.com/bands/ has thin or hard-to-read static content. Current value: Thin page content: approximately 126 words; prominent detected terms: stone, email, amipi, subscribe, newsletter. Expand the page with specific copy about Bands, include FAQs, and add internal links to related service/product pages so both users and non-rendering crawlers understand the page.
LOW VIEWPORT: DESKTOP, MOBILE	4	No H2 subheadings found Organize the page with descriptive H2 sections. https://www.amipi.com/bands/ https://www.amipi.com/Contact-Us/ https://www.amipi.com/compare-product.php https://www.amipi.com/My-Wishlist/	https://www.amipi.com/bands/ has no H2 subheadings. Add page-specific H2s such as "Bands Overview", "Key Benefits", and "Frequently Asked Questions" based on the current content terms: stone, email, amipi, subscribe, newsletter.

Generative Engine Optimization

Recommended approach: Add an llms.txt file, ensure Entity schema is present, and make content accessible to non-rendering bots.

SEVERITY	AFFECTED PAGES	FINDING & SAMPLES	RECOMMENDED FIX
MEDIUM VIEWPORT: DESKTOP, MOBILE	1	Missing Organization or Person schema Entity schema is critical for Knowledge Graphs used by LLMs to answer queries. https://www.amipi.com	https://www.amipi.com has no recognized JSON-LD structured data. Add Organization schema tied to this page, for example <code>{"@context":"https://schema.org","@type":"Organization","name":"START YOUR DIAMOND SEARCH HERE","url":"https://www.amipi.com/","publisher":{"@type":"Organization","name":"AMIPi"}}</code> . This gives search engines and AI crawlers an explicit entity/page relationship instead of relying only on visible text.
LOW VIEWPORT: DESKTOP	1	Thin static HTML content (Possible JS dependency) Page has very little text in raw HTML. Non-rendering LLM crawlers may fail to read your content if it relies on client-side rendering. https://www.amipi.com/My-Wishlist/	https://www.amipi.com/My-Wishlist/ has thin or hard-to-read static content. Current value: Thin static HTML content (Possible JS dependency); prominent detected terms: Data Not Available. Expand the page with specific copy about My Wishlist, include FAQs, and add internal links to related service/product pages so both users and non-rendering crawlers understand the page.

Social

Website quality

Recommended approach: Review and resolve the affected URLs.

SEVERITY	AFFECTED PAGES	FINDING & SAMPLES	RECOMMENDED FIX
LOW VIEWPORT: DESKTOP	1	Missing YouTube profile link on homepage https://www.amipi.com	https://www.amipi.com does not expose a YouTube profile link in the scanned homepage markup. Add the verified YouTube profile URL in the header/footer near the existing contact or brand links. Use the real profile URL only; if the company does not maintain that profile, document it as intentionally unavailable instead of linking to an empty account.
LOW VIEWPORT: DESKTOP	1	Missing X/Twitter profile link on homepage https://www.amipi.com	https://www.amipi.com does not expose a X/Twitter profile link in the scanned homepage markup. Add the verified X/Twitter profile URL in the header/footer near the existing contact or brand links. Use the real profile URL only; if the company does not maintain that profile, document it as intentionally unavailable instead of linking to an empty account.
LOW VIEWPORT: DESKTOP	1	No Facebook Pixel tracking detected https://www.amipi.com	https://www.amipi.com has no Meta Pixel script detected. If Facebook/Instagram ads or retargeting are active, install the site-specific Meta Pixel ID through GTM or the page template and verify the fbq('track', 'PageView') event. If paid social is not used, mark this as intentionally not applicable rather than adding tracking unnecessarily.

Security

Visitor safety and browser trust

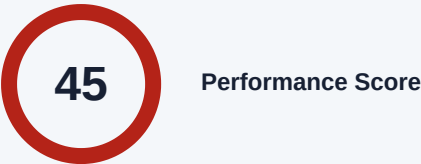

Recommended approach: Remove mixed content and deploy protective response headers after compatibility testing.

SEVERITY	AFFECTED PAGES	FINDING & SAMPLES	RECOMMENDED FIX
MEDIUM VIEWPORT: DESKTOP, MOBILE	1	Missing Security Headers: HSTS Implement missing headers to protect against clickjacking, MIME-sniffing, and downgrade attacks. https://www.amipi.com	On https://www.amipi.com , the response is missing: HSTS. This weakens protection against clickjacking, MIME-sniffing, or HTTPS downgrade attacks. Configure the web server/CDN to return: Strict-Transport-Security: max-age=31536000; includeSubDomains; preload.

9. Real Core Web Vitals (Lighthouse Lab Data)

Browser-rendered metrics from Google PageSpeed Insights for the homepage (<https://www.amipi.com>).

Desktop Performance

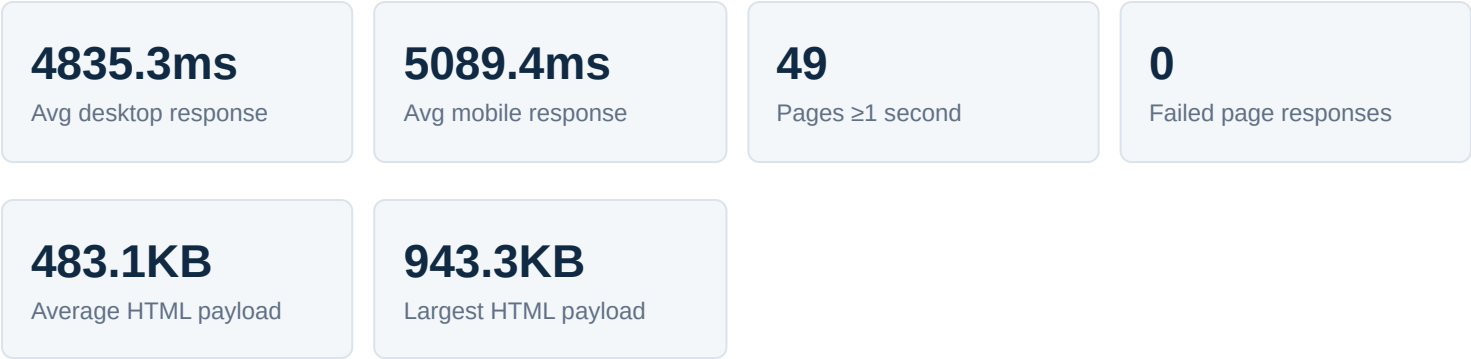

3.2 s	5.6 s
LCP	INP
0.002	760 ms
CLS	TBT
5.5 s	1.0 s
Speed Index	FCP

Mobile Performance

11.1 s	26.5 s
LCP	INP
0	640 ms
CLS	TBT
14.4 s	4.5 s
Speed Index	FCP

10. Crawl-Time Performance Analysis

Interpretation: These are crawl-time response and HTML transfer measurements across all internal pages. They provide broad site coverage but are deliberately not presented as Core Web Vitals.

Homepage Resource Breakdown (Network Waterfall)

Total transfer size by asset type measured via headless browser.

Resource Type	Transfer Size	GTmetrix / Optimization Savings Estimate
Scripts (JS)	374.3 KB	Minifying and deferring unused JS could save up to 30%.
Images	371.9 KB	Converting to WebP/AVIF and proper sizing typically saves 40-60%.
Stylesheets (CSS)	132.1 KB	Removing unused CSS can save 10-20%.
Fonts	0.0 KB	Using WOFF2 and font-display: swap improves rendering.
Documents (HTML)	501.5 KB	Gzip/Brotli compression usually handles this efficiently.
Other / Third-Party	0.0 KB	Review third-party pixels and embeds.

11. Social Profile & Tracking Presence

We scanned the homepage for connected social profiles and essential tracking pixels.

PLATFORM	DETECTED?	FOUND URL / DETAILS
Facebook	YES	https://www.facebook.com/Amipi-Diamonds-166389680059646/?fref=nf
Instagram	YES	https://www.instagram.com/amipiinc/
LinkedIn	YES	https://www.linkedin.com/company/amipi-inc-
YouTube	NO	Not found on homepage
X/Twitter	NO	Not found on homepage
Facebook Pixel	NO	Not found on homepage

12. Technology & Infrastructure

Fingerprinting of the underlying web server, hosting, CMS, and DNS infrastructure.

Component	Detected Value
Web Server	nginx/1.31.1
Hosting IP	144.208.74.247
CMS / Generator	Unknown
Frontend Libraries	Bootstrap, Bootstrap CSS, Font Awesome, Google Analytics, jQuery
SPF Record (Email Security)	Configured
DMARC Record (Email Security)	Configured

13. Keyword Analysis (Homepage)

Top keywords and phrases extracted from the homepage text, cross-referenced with crucial on-page SEO elements.

Top Keywords (Unigrams)

KEYWORD	COUNT	IN TITLE	IN DESC	IN H1-H6
diamonds	19	Yes	No	No
amipi	18	Yes	No	Yes
jewelry	12	Yes	No	No
email	12	No	No	No
bracelets	10	No	No	Yes
bangles	10	No	No	Yes
diamond	9	Yes	No	Yes
price	9	No	No	Yes
round	8	No	No	Yes
marquise	8	No	No	No

Top Phrases (Bigrams)

PHRASE	COUNT	IN TITLE	IN DESC	IN H1-H6
bracelets bangles	7	No	No	No
diamonds round	6	No	No	No
round marquise	6	No	No	No
marquise princess	6	No	No	No
princess asscher	6	No	No	No
asscher cushion	6	No	No	No
cushion radiant	6	No	No	No
radiant oval	6	No	No	No
oval pear	6	No	No	No
pear emerald	6	No	No	No

Detailed opportunity analysis

Priority	Issue	Description	Why it matters	Expected improvement	Difficulty
Critical	Reduce unused JavaScript	Reduce unused JavaScript and defer loading scripts until they are required to decrease bytes consumed by network activity. [Learn how to reduce unused JavaScript] (https://developer.chrome.com/docs/lighthouse/performance/unused-javascript/).	Unused JavaScript increases transfer size, parsing time, and main-thread work.	Lower JS transfer, faster parsing, reduced TBT, and improved LCP on script-heavy pages.	Medium
Critical	Reduce unused JavaScript	Reduce unused JavaScript and defer loading scripts until they are required to decrease bytes consumed by network activity. [Learn how to reduce unused JavaScript] (https://developer.chrome.com/docs/lighthouse/performance/unused-javascript/).	Unused JavaScript increases transfer size, parsing time, and main-thread work.	Lower JS transfer, faster parsing, reduced TBT, and improved LCP on script-heavy pages.	Medium
Critical	Reduce initial server response time	Keep the server response time for the main document short because all other requests depend on it. [Learn more about the Time to First Byte metric] (https://developer.chrome.com/docs/lighthouse/performance/time-to-first-byte/).	Slow server response delays every render milestone that depends on the HTML document.	Lower TTFB and faster FCP/LCP.	Hard
Critical	Reduce initial server response time	Keep the server response time for the main document short because all other requests depend on it. [Learn more about the Time to First Byte metric] (https://developer.chrome.com/docs/lighthouse/performance/time-to-first-byte/).	Slow server response delays every render milestone that depends on the HTML document.	Lower TTFB and faster FCP/LCP.	Hard

Priority	Issue	Description	Why it matters	Expected improvement	Difficulty
Critical	Reduce unused CSS	Reduce unused rules from stylesheets and defer CSS not used for above-the-fold content to decrease bytes consumed by network activity. [Learn how to reduce unused CSS] (https://developer.chrome.com/docs/lighthouse/performance/unused-css-rules/).	Unused CSS blocks rendering and adds unnecessary bytes before the page can paint.	Reduced render-blocking CSS and faster FCP/LCP.	Medium
Critical	Reduce unused CSS	Reduce unused rules from stylesheets and defer CSS not used for above-the-fold content to decrease bytes consumed by network activity. [Learn how to reduce unused CSS] (https://developer.chrome.com/docs/lighthouse/performance/unused-css-rules/).	Unused CSS blocks rendering and adds unnecessary bytes before the page can paint.	Reduced render-blocking CSS and faster FCP/LCP.	Medium
Critical	Minimize main-thread work	Consider reducing the time spent parsing, compiling and executing JS. You may find delivering smaller JS payloads helps with this. [Learn how to minimize main-thread work] (https://developer.chrome.com/docs/lighthouse/performance/mainthread-work-breakdown/)	Heavy main-thread work delays rendering and blocks user input.	Reduced TBT and faster interaction readiness.	Hard
Critical	Minimize main-thread work	Consider reducing the time spent parsing, compiling and executing JS. You may find delivering smaller JS payloads helps with this. [Learn how to minimize main-thread work] (https://developer.chrome.com/docs/lighthouse/performance/mainthread-work-breakdown/)	Heavy main-thread work delays rendering and blocks user input.	Reduced TBT and faster interaction readiness.	Hard
Critical	Reduce JavaScript execution time	Consider reducing the time spent parsing, compiling, and executing JS. You may find delivering smaller JS payloads helps with this. [Learn how to reduce Javascript execution time] (https://developer.chrome.com/docs/lighthouse/performance/boottup-time/).	Expensive JavaScript boot-up blocks the main thread during load.	Lower TBT and faster interactive readiness.	Hard
Critical	Reduce JavaScript execution time	Consider reducing the time spent parsing, compiling, and executing JS. You may find delivering smaller JS payloads helps with this. [Learn how to reduce Javascript execution time] (https://developer.chrome.com/docs/lighthouse/performance/boottup-time/).	Expensive JavaScript boot-up blocks the main thread during load.	Lower TBT and faster interactive readiness.	Hard
High	Minify JavaScript	Minifying JavaScript files can reduce payload sizes and script parse time. [Learn how to minify JavaScript] (https://developer.chrome.com/docs/lighthouse/performance/unminified-javascript/).	Unminified JavaScript increases transfer size and parse cost.	Reduced JS transfer and parse time.	Easy

Priority	Issue	Description	Why it matters	Expected improvement	Difficulty
High	Minify JavaScript	Minifying JavaScript files can reduce payload sizes and script parse time. [Learn how to minify JavaScript] (https://developer.chrome.com/docs/lighthouse/performance/unminified-javascript/).	Unminified JavaScript increases transfer size and parse cost.	Reduced JS transfer and parse time.	Easy
High	Minify CSS	Minifying CSS files can reduce network payload sizes. [Learn how to minify CSS] (https://developer.chrome.com/docs/lighthouse/performance/unminified-css/).	Unminified CSS sends unnecessary bytes and can slow render-blocking stylesheets.	Reduced CSS transfer size and faster render start.	Easy
High	Minify CSS	Minifying CSS files can reduce network payload sizes. [Learn how to minify CSS] (https://developer.chrome.com/docs/lighthouse/performance/unminified-css/).	Unminified CSS sends unnecessary bytes and can slow render-blocking stylesheets.	Reduced CSS transfer size and faster render start.	Easy
High	Avoid enormous network payloads	Large network payloads cost users real money and are highly correlated with long load times. [Learn how to reduce payload sizes] (https://developer.chrome.com/docs/lighthouse/performance/total-byte-weight/).	Large total transfer size slows page load and hurts users on slower connections.	Lower page weight and faster load time.	Medium
High	Avoid enormous network payloads	Large network payloads cost users real money and are highly correlated with long load times. [Learn how to reduce payload sizes] (https://developer.chrome.com/docs/lighthouse/performance/total-byte-weight/).	Large total transfer size slows page load and hurts users on slower connections.	Lower page weight and faster load time.	Medium
Low	Avoid large layout shifts	These are the largest layout shifts observed on the page. Each table item represents a single layout shift, and shows the element that shifted the most. Below each item are possible root causes that led to the layout shift. Some of these layout shifts may not be included in the CLS metric value due to [windowing] (https://web.dev/articles/cls#what_is_cls). [Learn how to improve CLS] (https://web.dev/articles/optimize-cls)	Layout shifts create visual instability and can hurt Page Experience.	Lower CLS and a more stable user experience.	Medium
Low	Avoid large layout shifts	These are the largest layout shifts observed on the page. Each table item represents a single layout shift, and shows the element that shifted the most. Below each item are possible root causes that led to the layout shift. Some of these layout shifts may not be included in the CLS metric value due to [windowing] (https://web.dev/articles/cls#what_is_cls). [Learn how to improve CLS]	Layout shifts create visual instability and can hurt Page Experience.	Lower CLS and a more stable user experience.	Medium

Priority	Issue	Description	Why it matters	Expected improvement	Difficulty
		(https://web.dev/articles/optimize-cls)			
Low	Avoid long main-thread tasks	Lists the longest tasks on the main thread, useful for identifying worst contributors to input delay. [Learn how to avoid long main-thread tasks] (https://web.dev/articles/optimize-long-tasks)	Long tasks block the browser from responding quickly to user input.	Lower TBT and smoother interaction readiness.	Hard
Low	Avoid long main-thread tasks	Lists the longest tasks on the main thread, useful for identifying worst contributors to input delay. [Learn how to avoid long main-thread tasks] (https://web.dev/articles/optimize-long-tasks)	Long tasks block the browser from responding quickly to user input.	Lower TBT and smoother interaction readiness.	Hard
Data Not Available	CDN Usage Recommendations	Data Not Available	A CDN can reduce latency by serving static assets closer to users.	Reduced latency for static resources when CDN coverage is applicable.	Medium
Data Not Available	Cache Policy / Efficient Cache Lifetime	Data Not Available	Short cache lifetimes force repeat visitors to re-download static assets.	Faster repeat visits and reduced network transfer.	Easy
Data Not Available	Critical Request Chains	Data Not Available	Long dependency chains delay discovery of render-critical resources.	Earlier rendering and improved FCP/LCP.	Hard
Data Not Available	Excessive DOM Size	Data Not Available	Large DOMs increase style calculation, layout work, memory use, and interaction latency.	Less main-thread work and better interaction responsiveness.	Hard
Data Not Available	Legacy JavaScript Serving	Data Not Available	Legacy JavaScript sends extra code to modern browsers and increases parse/compile work.	Smaller JavaScript payloads and reduced main-thread work.	Medium
Data Not Available	Network Dependency Analysis	Data Not Available	A complex dependency tree delays important requests and amplifies latency.	Shorter critical path and faster content rendering.	Hard
Data Not Available	Next-Generation Image Formats (WebP/AVIF)	Data Not Available	Legacy image formats are often larger than WebP or AVIF equivalents.	Reduced image bytes and faster visual loading.	Medium
Data Not Available	Offscreen Image Deferral (Lazy Loading)	Data Not Available	Below-the-fold images compete with above-the-fold content for bandwidth.	Fewer initial requests and faster first viewport rendering.	Easy
Data Not Available	Properly Sized Images	Data Not Available	Oversized images waste bandwidth and delay LCP, especially on mobile.	Lower image transfer and faster LCP.	Medium
Data Not Available	Render Blocking Resources	Data Not Available	Blocking CSS and synchronous scripts delay first paint and LCP.	Faster FCP and LCP.	Medium
Data Not Available	Third-party Code Impact	Data Not Available	Third-party scripts can block the main thread and add network latency outside your release control.	Reduced main-thread blocking and fewer competing network requests.	Medium

Priority	Issue	Description	Why it matters	Expected improvement	Difficulty
Data Not Available	font-display Optimization	Data Not Available	Web fonts can hide text while downloading, delaying readable content.	Text appears sooner and perceived performance improves.	Easy

Per-page performance data availability

GTmetrix Top Issues & Prioritized Recommendations

This table follows the GTmetrix Top Issues style as closely as possible using actual Lighthouse/PageSpeed values when available. GTmetrix-only values are marked as Data Not Available unless a GTmetrix data source is connected.

RANK	ISSUE NAME	SEVERITY	AFFECTED PAGES	TIME SAVINGS	SIZE SAVINGS	DIFFICULTY	EXPECTED GAIN
#1	Reduce unused JavaScript	Critical	https://www.amipi.com (mobile)	2.9s	1.2 MB	Medium	Lower JS transfer, faster parsing, reduced TBT, and improved LCP on script-heavy pages.
GTmetrix recommendation: Remove unused scripts, split bundles by route, defer non-critical code, and load features only when needed.							
#2	Reduce unused JavaScript	Critical	https://www.amipi.com (desktop)	630ms	1.2 MB	Medium	Lower JS transfer, faster parsing, reduced TBT, and improved LCP on script-heavy pages.
GTmetrix recommendation: Remove unused scripts, split bundles by route, defer non-critical code, and load features only when needed.							
#3	Reduce initial server response time	Critical	https://www.amipi.com (mobile)	554ms	Data Not Available	Hard	Lower TTFB and faster FCP/LCP.
GTmetrix recommendation: Add server-side caching, optimize database queries, tune hosting, and use edge caching where appropriate.							
#4	Reduce initial server response time	Critical	https://www.amipi.com (desktop)	527ms	Data Not Available	Hard	Lower TTFB and faster FCP/LCP.
GTmetrix recommendation: Add server-side caching, optimize database queries, tune hosting, and use edge caching where appropriate.							
#5	Reduce unused CSS	Critical	https://www.amipi.com (mobile)	450ms	126 KB	Medium	Reduced render-blocking CSS and faster FCP/LCP.
GTmetrix recommendation: Remove unused selectors, split critical CSS, and load non-critical styles after first render.							
#6	Reduce unused CSS	Critical	https://www.amipi.com (desktop)	40ms	127 KB	Medium	Reduced render-blocking CSS and faster FCP/LCP.
GTmetrix recommendation: Remove unused selectors, split critical CSS, and load non-critical styles after first render.							
#7	Minimize main-thread work	Critical	https://www.amipi.com (desktop)	Data Not Available	Data Not Available	Hard	Reduced TBT and faster interaction readiness.

RANK	ISSUE NAME	SEVERITY	AFFECTED PAGES	TIME SAVINGS	SIZE SAVINGS	DIFFICULTY	EXPECTED GAIN
GTmetrix recommendation: Reduce script execution, split long tasks, move expensive work off-thread, and simplify layout work.							
#8	Minimize main-thread work	Critical	https://www.amipi.com (mobile)	Data Not Available	Data Not Available	Hard	Reduced TBT and faster interaction readiness.
GTmetrix recommendation: Reduce script execution, split long tasks, move expensive work off-thread, and simplify layout work.							
#9	Reduce JavaScript execution time	Critical	https://www.amipi.com (desktop)	Data Not Available	Data Not Available	Hard	Lower TBT and faster interactive readiness.
GTmetrix recommendation: Trim third-party scripts, defer non-critical JavaScript, and break large bundles into smaller chunks.							
#10	Reduce JavaScript execution time	Critical	https://www.amipi.com (mobile)	Data Not Available	Data Not Available	Hard	Lower TBT and faster interactive readiness.
GTmetrix recommendation: Trim third-party scripts, defer non-critical JavaScript, and break large bundles into smaller chunks.							
#11	Minify JavaScript	High	https://www.amipi.com (desktop)	Data Not Available	45 KB	Easy	Reduced JS transfer and parse time.
GTmetrix recommendation: Minify JavaScript in the production build and remove source-only code from served bundles.							
#12	Minify JavaScript	High	https://www.amipi.com (mobile)	Data Not Available	45 KB	Easy	Reduced JS transfer and parse time.
GTmetrix recommendation: Minify JavaScript in the production build and remove source-only code from served bundles.							
#13	Minify CSS	High	https://www.amipi.com (desktop)	Data Not Available	2 KB	Easy	Reduced CSS transfer size and faster render start.
GTmetrix recommendation: Minify CSS in the build pipeline and serve compressed production assets.							
#14	Minify CSS	High	https://www.amipi.com (mobile)	Data Not Available	2 KB	Easy	Reduced CSS transfer size and faster render start.
GTmetrix recommendation: Minify CSS in the build pipeline and serve compressed production assets.							
#15	Avoid enormous network payloads	High	https://www.amipi.com (desktop)	Data Not Available	Data Not Available	Medium	Lower page weight and faster load time.
GTmetrix recommendation: Compress assets, remove unused code, optimize images, and audit third-party payloads.							
#16	Avoid enormous network payloads	High	https://www.amipi.com (mobile)	Data Not Available	Data Not Available	Medium	Lower page weight and faster load time.
GTmetrix recommendation: Compress assets, remove unused code, optimize images, and audit third-party payloads.							

Consolidated Optimization Roadmap

Roadmap sorted by priority and measured savings where data is available.

Priority	Optimization	Time Savings	Data Savings	Difficulty	SEO Impact	Performance Impact	Estimated LightHouse Score Improvement
Critical	Reduce unused JavaScript	2.9s	1.2 MB	Medium	Medium	High	Data Not Available
Critical	Reduce unused JavaScript	630ms	1.2 MB	Medium	Medium	High	Data Not Available
Critical	Reduce initial server response time	554ms	Data Not Available	Hard	High	High	Data Not Available
Critical	Reduce initial server response time	527ms	Data Not Available	Hard	High	High	Data Not Available
Critical	Reduce unused CSS	450ms	126 KB	Medium	Low	Medium	Data Not Available
Critical	Reduce unused CSS	40ms	127 KB	Medium	Low	Medium	Data Not Available
Critical	Minimize main-thread work	Data Not Available	Data Not Available	Hard	Medium	High	Data Not Available
Critical	Minimize main-thread work	Data Not Available	Data Not Available	Hard	Medium	High	Data Not Available
Critical	Reduce JavaScript execution time	Data Not Available	Data Not Available	Hard	Medium	High	Data Not Available
Critical	Reduce JavaScript execution time	Data Not Available	Data Not Available	Hard	Medium	High	Data Not Available
High	Minify JavaScript	Data Not Available	45 KB	Easy	Low	Medium	Data Not Available
High	Minify JavaScript	Data Not Available	45 KB	Easy	Low	Medium	Data Not Available
High	Minify CSS	Data Not Available	2 KB	Easy	Low	Low	Data Not Available
High	Minify CSS	Data Not Available	2 KB	Easy	Low	Low	Data Not Available
High	Avoid enormous network payloads	Data Not Available	Data Not Available	Medium	Medium	High	Data Not Available
High	Avoid enormous network payloads	Data Not Available	Data Not Available	Medium	Medium	High	Data Not Available
Low	Avoid large layout shifts	Data Not Available	Data Not Available	Medium	Medium	Medium	Data Not Available

Priority	Optimization	Time Savings	Data Savings	Difficulty	SEO Impact	Performance Impact	Estimated Lighthouse Score Improvement
Low	Avoid large layout shifts	Data Not Available	Data Not Available	Medium	Medium	Medium	Data Not Available
Low	Avoid long main-thread tasks	Data Not Available	Data Not Available	Hard	Medium	High	Data Not Available
Low	Avoid long main-thread tasks	Data Not Available	Data Not Available	Hard	Medium	High	Data Not Available
Data Not Available	CDN Usage Recommendations	Data Not Available	Data Not Available	Medium	Low	Medium	Data Not Available
Data Not Available	Cache Policy / Efficient Cache Lifetime	Data Not Available	Data Not Available	Easy	Low	Medium	Data Not Available
Data Not Available	Critical Request Chains	Data Not Available	Data Not Available	Hard	Medium	High	Data Not Available
Data Not Available	Excessive DOM Size	Data Not Available	Data Not Available	Hard	Medium	High	Data Not Available
Data Not Available	Legacy JavaScript Serving	Data Not Available	Data Not Available	Medium	Low	Medium	Data Not Available
Data Not Available	Network Dependency Analysis	Data Not Available	Data Not Available	Hard	Medium	High	Data Not Available
Data Not Available	Next-Generation Image Formats (WebP/AVIF)	Data Not Available	Data Not Available	Medium	Medium	High	Data Not Available
Data Not Available	Offscreen Image Deferral (Lazy Loading)	Data Not Available	Data Not Available	Easy	Low	Medium	Data Not Available
Data Not Available	Properly Sized Images	Data Not Available	Data Not Available	Medium	Medium	High	Data Not Available
Data Not Available	Render Blocking Resources	Data Not Available	Data Not Available	Medium	Medium	High	Data Not Available
Data Not Available	Third-party Code Impact	Data Not Available	Data Not Available	Medium	Low	High	Data Not Available
Data Not Available	font-display Optimization	Data Not Available	Data Not Available	Easy	Low	Medium	Data Not Available

15. Complete Findings Inventory (Export)

The full list of all **3850** findings across every single URL has been moved to a separate spreadsheet attachment to keep this document concise.

Full findings (3850 rows): see attached `amipi_findings_20260715_141511.csv`

16. Methodology & Limitations

Breadth-first internal crawl with static HTML inspection, response timing, payload measurement, technical SEO, metadata, accessibility, content, URL, and performance checks. Note: Scoring is derived from an internal crawl methodology and is not directly equivalent to third-party audit tool scores.

- Performance values are server-response and HTML payload measurements, not a Lighthouse lab run; LCP, CLS, INP, and TBT require browser instrumentation.
- Accessibility checks cover detectable markup only and do not replace keyboard, screen-reader, contrast, or WCAG conformance testing.
- Backlink authority, rankings, and traffic require external search-provider data and are not inferred by this crawler.
