1. Executive Summary

The website has 1,042 technical issues across 71 pages, with the most severe being a critically slow homepage response time (3.5 seconds) that will drive visitors away. Accessibility gaps—such as missing form labels and undeclared page language—pose legal risks and hinder users with disabilities. Basic SEO elements like meta descriptions, canonical tags, and structured data are absent, limiting search visibility. Fixing server speed, adding accessibility labels, and completing metadata will deliver the biggest immediate gains.

Audit scope: Breadth-first internal crawl with static HTML inspection, response timing, payload measurement, technical SEO, metadata, accessibility, content, URL, and performance checks.

592.2KB Average HTML payload	801.0KB Largest HTML payload	0 Failed page responses	{'200': 71} Status distribution

Interpretation: These are crawl-time response and HTML transfer measurements. They provide broad site coverage but are deliberately not presented as Core Web Vitals. Browser metrics such as LCP, CLS, INP, and TBT require a Lighthouse or Chrome UX measurement.

7. Prioritized Remediation Plan

The plan groups recurring findings into implementable work rather than listing hundreds of duplicate rows.
